AND TOA OF THE	TAIRS INFORMATION AFFECTING THE RATIONAL DEFENSE S. WITHIN THE BERNHOOD OF TITLE 18. SECTIONS 709 S. CODE, AS ABERDOD, 178 TRANSSISSION OF REVEL S. CODE, AS ABERDOD, 178 TRANSSISSION OF REVEL THE REPRODUCTION OF THIS FORM IS PROMISTED.	NEVALUATED INFORMATION

- 1. Jet plane flights, seen daily from P. Camp No 7424/18, were located 6 km southeast of Saki (4508 11/33036 E), Crimean ASSR. The planes presumably took off from an airfield 4 to 6 km south of the camp. The area between the camp and the airfield was hilly and wooded. Up to 10 jet planes were seen in the air at the same time.
- 2. The following two types were identified:
 Short and stubby fuselage, air intake at front and air exhaust at tail were definitely seen, wings conspicuously small and slim, rudder assembly noticeably high and pointed. The planes were strikingly maneuverable and raid. A faint smoke plume emanated from the tail.
 The second type plane, which was seen more often, had a long slim fuselage and long wings which were considerably swept back. The plane seemed to be considerably faster and more maneuverable than the other type.
 The faint noise of the engines was conspicuous. Three-fourths of all planes were of the second type.
- 3. Biplane trainers were seen almost every day.
